# REVIVE METALLICS

## APPLICATION GUIDE

## Revive Metallics

Revive Metallics is a range of 8 little gems of 4 glittery golds and 4 pearlescent silvers for decorating frames, furniture and small projects.

Liquid Gold adds a subtle touch of luxury and sophistication to trim, picture frames, pots and furniture. Available in 4 rich hues, Liquid Gold is a water-based decorative metallic gold.

Duchess Satin is a water based pearlescent paint with the rich lustre of satin fabric. Add dimension and texture whilst creating a delicate pearly glitter on frames, trims, architraves or furniture.

Most household marks and stains easily wipe away.

For interior use.

## Suitable Surfaces:

Suitable for most paintable surfaces, including previously varnished, lacquered or painted furniture. Also suitable for picture frames and trim.

## Colours:

There are eight popular colours, factory tinted and ready to go.

### Estimate your paint needs:

Revive Metallics cover approximately 8-10 square metres per litre, which means that a 100ml pot will cover approximately 1 square metre. Take into account that two to three coats are required for optimum coverage.

### Choose your tools:

Apply by brush. Visible brushstrokes are a characteristic of metallic and pearlescent paints, and it is for this reason that we do not recommend application with a paint roller.

### Clean & Prepare:

All pieces should be thoroughly cleaned to remove dust, dirt and grime, and if necessary, degreased.

For best results, prime before painting. Lightly sand the surface and wipe clean, then apply 1 coat of Porter's Prepare & Prime (a multi-surfaces primer and stain blocker). Allow to dry for 2 hours before applying the topcoat.

### Application of paint:

#### **First Coat:**

Paint a thin coat in the direction of the grain of the wood, using long strokes. Paint from end to end. Avoid short brush strokes, and repeatedly brushing back over the paint as it is drying, as this will cause stop/start marks and brushstroke texture.

Touch dry in 1 hour. Allow a minimum of 4 hours dry time before applying the second coat.

#### **Second Coat:**

Inspect your project and gently sand off any drips. Apply a second coat as you did for the first coat, using long strokes and brushing from end to end to avoid start/stop marks.

Touch dry in 1 hour. Allow to dry for 6 hours, or if more than two coats are required, allow 4 hours before recoating.

Note: As visible brushstrokes are a characteristic of metallic and pearlescent paints, application methods will vary end results.

## WASH UP & LIMITATIONS

Wash Up:

Water

Limitations:

Do not apply in high humidity, below 10°C or above 30°C.
